Cloudphysician

CLOUDPHYSICIAN

Cloudphysician aspires to be the global virtual hospital. We are reimagining the delivery of critical care through patient-centric solutions. We use our advanced technology, designed and developed in-house, to increase access to care, all across the globe. Cloudphysician has been radically transforming delivery of critical care by impacting thousands of patients across India and enabling them to receive high quality care irrespective of their location and is moving towards mainstreaming this model globally.

Our Care Center, based in Bangalore, is staffed 24/7 by a highly qualified and trained critical care team that includes super-specialist doctors, nurses, dieticians, and pharmacologists. The clinical team uses our proprietary platform, RADAR, to connect to hospital ICUs to oversee and manage the care of critically ill patients across multiple regions. RADAR, built by our team of technology experts, incorporates automation, computer vision, real-time video, and data analytics to help expert care providers connect to and provide care to patients.

We have cared for nearly 50,000 intensive care patients across 16 states in India and saved numerous lives.

JOB DESCRIPTION

We are looking to hire an experienced DevOps Engineer with expertise in cloud technologies. As a Cloudphysician DevOps engineer, you will be responsible for deploying, automating, maintaining, troubleshooting and improving the systems that keep our Cloud infrastructure running smoothly. The role will encompass the use of a broad range of AWS/GCP based technologies, Linux and application environments. In addition, you'll take responsibility and ownership for ensuring the Cloudphysician infrastructure is available 24 x 7 for the remote critical care of patients.

You should have experience maintaining infrastructure deployed at scale, and excellent troubleshooting skills. Ultimately, a high-level DevOps Engineer can design and maintain a dynamic and stable system to perfectly meet the needs of the company.

KEY RESPONSIBILITIES

1. Good understanding of container services (Docker) is a must
2. Good understanding of container orchestration (Kubernetes) is a must
3. AWS or similar devOps certification preferred
4. Experience in scripting languages like Python or Bash
5. Integral part of the role is championing and leading infrastructure as code.
6. Ability to administer and troubleshoot Linux based systems
7. Experience working with High Availability / Load Balancing and Security
8. Hands-on experience with modern CI/CD tools
9. Build/maintain operational tools for deployment, monitoring, and analysis of cloud infrastructure
10. Good communication skills

11. Experience in software engineering/agile preferred
12. Bonus: Previously worked in Healthcare/healthTech or a startup environment

PREFERRED QUALIFICATIONS

1. 3+ years of experience in the area of DevOps/cloud engineering
2. Bachelor's degree/diploma in Computer Science or a similar field
